

NEVER SUMMER
DEALER CATALOG 2007/2008
NS FACTORY BUILT/DENVER CO

Never Summer's reputation of quality and durability began in the early years of snowboarding. Designing and building snowboards since 1983 has given us years of experience in testing and perfecting our snowboard designs and construction methods. We continue to work very closely with the world's leading raw materials manufacturers and engineers to make sure every Never Summer snowboard is the most durable, high performance board on the planet! Each snowboard is carefully handcrafted in our

Denver, Colorado factory to precision tolerances. As a result, only the world's best snowboard shops proudly sell our products. Focusing less on excessive promotion and hype, and more on using the highest quality materials, craftsmanship and customer service has made Never Summer the world's premier independent snowboard company.

—Tracey and Tim Canaday

Titan Summit Heritage Premier Premier T5 SL Infinity Legacy Evo Pandora Revolver System

COOPER HOFFMEISTER

location: Brighton, UT.

photo: Kevinwestenbarger.com

Never Summer's exclusive CUSTOM FLIGHT CORE is the most technically advanced core system we've ever used. Designed and built in NS's woodcore facility, these cores fuse premium hardwood and ultra light softwood laminates together with vertical layers of elastomeric vibration dampers. These lightweight perimeter dampers actually increase vibration absorption the faster you ride while maintaining an incredible amount of snap and liveliness, providing a level of edge hold and high speed performance that only a Never Summer snowboard can deliver.

We were the first snowboard company to use and perfect SINTERED P-TEX SIDEWALLS, and we've never seen one crack. Unlike conventional ABS sidewalls, that have a tendency to crack in colder temperatures, SINTERED P-TEX SIDEWALLS maintain their integrity at any temperature.

POWERLAM V PLUS

We have added an additional layer of carbon fiber to our POWERLAM PLUS system, increasing edge hold and response without adding torsional stiffness to the tip and tail.

RDS1

This is our most extensive damping system specifically designed for the Premier and T5. Three full perimeter layers of elastomeric rubber foil are laminated between the metal edge, fiberglass and wood core. This provides unmatched stability and a smooth riding feel especially at high speeds.

RDS2

Similar in design to the RDS 1, the laminated damping layers on the RDS 2 are more extensive the full length of the effective edge, and less extensive in the tip and tail. This combines high speed stability with reduced tip and tail swing weight.

RDS3

This lightweight system uses three narrower laminated damping layers that provide the perfect combination of vibration absorption and stability. RDS 3 is specifically designed for the SL, Legacy and Infinity.

Crown Plastics has been the industry leader in sintered materials for over 32 years and has created the DURASURF 4501 sintered base exclusively for Never Summer. This new high density base is extremely fast and will provide unmatched performance and durability.

DAMPNESS & FLEX METERS

Dampness: 10 is very damp (more stable and smooth riding at high speeds), 1 is least damp (more snappy and lively underfoot) **Flex:** 10 is stiffer in flex (better for high speed freestyle and freeriding, better for bigger riders), 1 is softer in flex (better for presses, butters, more forgiving)

Example:

NS TECHNOLOGY 2007/2008

Our Evo, Revolver, Pandora & Infinity snowboards require the lightest and snappiest snowboard fiberglass available. BI-LITE fiberglass combines many of the strength characteristics of STS ADVANCED fiberglass with an ultra light glass fiber matrix. This delivers incredible freestyle performance without sacrificing durability.

CARBON VX SYSTEM

Never Summer's exclusive CARBON VX system has been divided into three separate design systems to offer the best combination of edge response, high speed stability and localized torsional stiffness. Our CARBON VXT, VXM and VXR systems use NS's engineered carbon laminate "V"s to increase energy transfer from the point of generation under the bindings to the snowboard's edge providing superior edge hold and response. Varying carbon "V" configurations create specific energy transfers and flex patterns to accommodate different riding styles.

Our CARBON VX system increases snap and power directly behind each binding, towards the center of the board without creating a stiff, flat spot in the center of the snowboard, providing a powerful but smooth and consistent flex pattern.

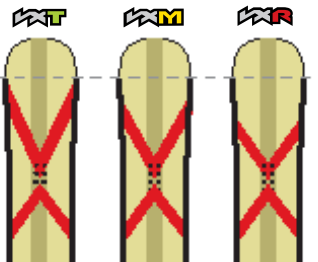

Our freeride boards benefit most from the CARBON VXT system which extends the carbon "V"s from the bindings to the ends of the effective edge increasing power and edge response. This system creates the most stable and solid ride especially at high speeds.

The carbon "V"s used in the Heritage's CARBON VXM system are set back from the ends of the effective edge to slightly soften the nose and tail while providing power, increased torsional stiffness and edge response from foot to edge. This is the perfect system to combine high speed stability with all mountain freeride performance.

The CARBON VXR system is specifically designed for our SL, Legacy and Infinity freestyle snowboards. The carbon "V"s are set back even further from the tip and tail to increase power and stiffness from the bindings to the edge. This system also helps soften the tip and tail just enough to help you dominate any terrain park or kicker that crosses your path.

The world's best snowboard fiberglass, period. Our STS ADVANCED fiberglass is a pre-hardened, pre-tensioned, layered laminate that has added elastomer stringers between the 0 degree and 90 degree glass fibers the length of the effective edge. This produces a stronger bond between the individual glass laminates giving our snowboard unmatched strength, edge hold and performance.

The EVO DAMPING SYSTEM (EDS) delivers increased edge hold and high speed stability without compromising the Evo, Pandora and Revolver's freestyle performance.

Eight individual layers of fiberglass combined with carbon uni-fibers and pre-tensioned STS glass stringers give the Titan and the Summit the most advanced structural laminate combination we've ever developed. The four fiberglass layers closest to the core are 45 degree laminates providing torsional stiffness and edge response. The 4 layers furthest from the core are 0 and 90 degree laminates, giving the board its superior strength from tip to tail and edge to edge. Carbon "V"s above the core provide increased snap, strength and power out of turns while the STS pre-tensioned glass stringers below the core, enhance camber retention and provide unmatched durability.

The TITAN DAMPING SYSTEM (TDS) greatly reduces vibration and provides unmatched high speed stability and control. Thin elastomeric rubber stringers reduce vibration from the metal edge and surrounding laminates. Stringers below the inserts and under the carbon dampen any additional vibration near the bindings, giving the Titan and the Summit a smooth riding feel underfoot without sacrificing snap and power throughout the board.

The TRI-RADIAL sidecut makes use of 3 different primary sidecut radiuses. A moderate center radius between the feet helps to stabilize the board at high speed. The more aggressive front radius, from the front foot to the front edge contact points, initiate turns effortlessly. The most aggressive rear radius, from the back foot to the rear edge contact points, give the Titan a quick and powerful finish to each turn.

Crown Plastics has developed an exclusive, super fast, durable sintered base specifically for the Titan and Summit. Just the right amount of graphite has been added making the DURASURF 5501 XT base the fastest we've ever used.

ONE BALL JAY XT

OBJ mixes a custom wax formula specifically for the Titan. This wax blends paraffin, including fluorinated paraffin, creating a bond to the XT sintered base that is ultra hydrophobic. In short, this is the fastest wax you'll find anywhere.

TITAN

The Titan rides smoother, responds quicker and turns faster than any freeride board you have ever ridden. Exclusive laminates, base material, damping system and shape make the Titan the choice for those who want to experience the ultimate NS snowboard.

TITAN TX

A wide version of the original, the TX uses the same exclusive materials and ultra-responsive tri-radial sidecut. This model allows riders with bigger feet to experience what the Titan is all about.

HERITAGE

The limited edition Heritage's deep sidecut, Carbon VXM laminate system and powerful flex, fuel this board's all-terrain dominance. The STS Advanced fiberglass and lightweight Custom Flight Core provide maximum pop and responsiveness, while the RDS 2 damping system delivers high speed edge-hold and performance anywhere on the mountain. Each limited edition Heritage will be numbered and comes complete with custom NS retro Colorado graphics.

SL

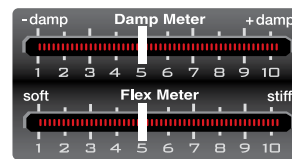

type: all mountain freestyle

The SL is an extremely agile, high performance freestyle board that does it all! The Carbon VXR gives this board more power and quick edge to edge response, while keeping the tip and tail forgiving. The result is a snowboard that can handle anything the mountain throws at you. If you want a board that excels in the park, on groomers, or on backcountry kickers, this is it.

NEW!

A wider version of the SL, the new 07/08 Legacy dominates all kinds of terrain from parks to groomers and backcountry kickers. Its width eliminates most toe and heel drag, but is narrow enough to be quick and responsive. A deeper sidecut, the Carbon VXR and powerful flex make it the most versatile, high-performance mid-wide board we've ever built! *Nuff said.

PREMIER type: freeride

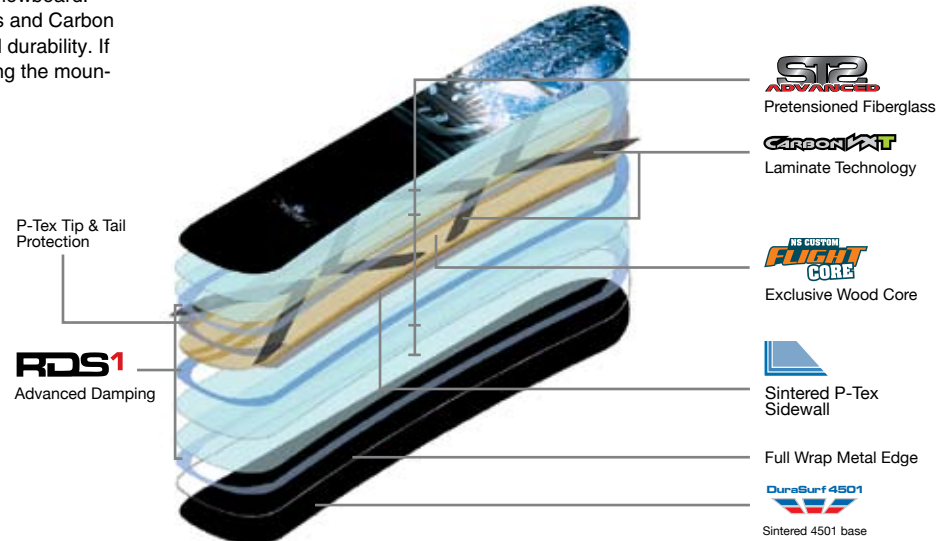

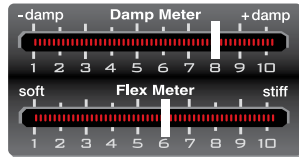

The Premier is Never Summer's classic smooth riding, all mountain snowboard. Its tip profile and sidecut, combined with our STS Advanced fiberglass and Carbon VXT, give this ultimate freeride board unmatched responsiveness and durability. If you like top to bottom speed runs, ducking into the trees or just cruising the mountain, get this board. Now go out and see if anyone can keep up.

PREMIER T5 type: big mountain freeride

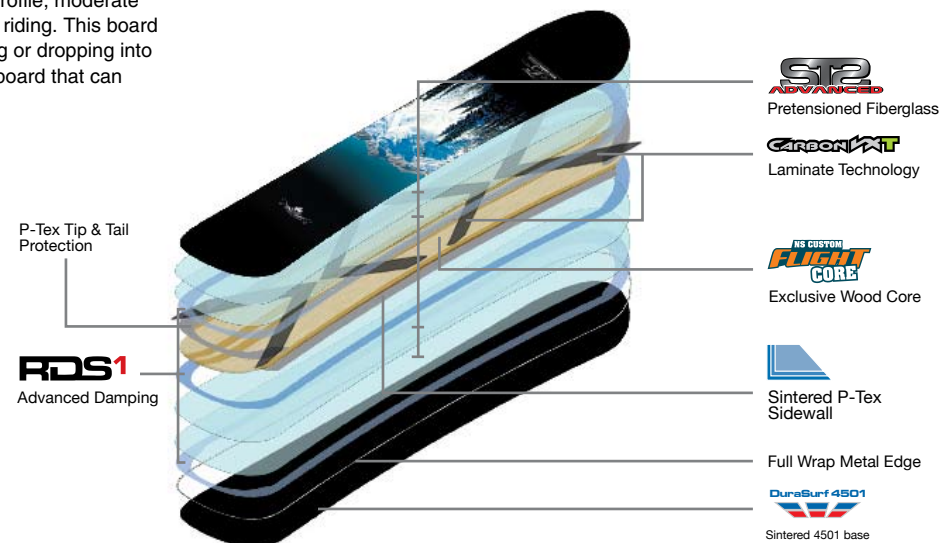

A longer version of the Premier, the T5 is designed with a freeride tip profile, moderate sidecut radius and extensive damping, making it ideal for big mountain riding. This board delivers an incredibly stable and responsive ride for high speed cruising or dropping into the most remote backcountry. There is no other big mountain freeride board that can dominate all terrain like this one.

||| SUMMIT

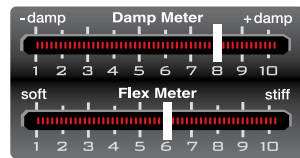

type: powder / freeride

The Summit's supreme powder performance is a culmination of directional flex, tapered shape, custom tip and tail profile and extensive damping. These unique design features blend unmatched powder flotation and high speed freeride stability and performance. The Summit will power through the deepest snow, crud, tight trees or anything else that gets in its way. Combine all of this with Never Summer's trademark durability and you have a high performance powder board that is second to none.

NEVER SUMMER LONGBOARDS

Never Summer is proud to introduce premium handcrafted longboard skateboards built from start to finish in our Denver, Colorado factory. Our exclusive composite materials and construction methods have given our snowboards their undisputed reputation of quality. NS longboards are made with that same level of quality and attention to detail. Each longboard features composite construction, P-Tex tip and tail bumpers, advanced engineering and a 3 year warranty.

CONSTRUCTION & MATERIALS

Never Summer will be using the following quality products on our longboards:

RANDAL TRUCKS

Randal II - The Randal II Trucks are longboard specific trucks. Featuring unique geometry to improve turning radius and stability at speed, the Randal II has a 50° kingpin and reversed hanger. These high end longboard trucks are available in 150mm and 180mm width.

SKATE TECHNOLOGY

Our abec 5 bearings, manufactured by Skate Technology, are specifically designed to be the best skate bearing ever. The speed and durability of our bearings far exceed any other abec 5 bearing on the market.

AEND URETHANE

All Never Summer wheels will be manufactured by premier urethane provider Aend Industries. Aend is considered the best wheel manufacturer in longboarding. Our exclusive chemistries will provide the ultimate in grip and durability. Aend Urethane features an abrasion rating of 90/100 and an 85% rebound. All wheels feature a precision bearing press fit core and super high impact polyurethane. Our retro style 72mm wheels are the ideal for high speed grip and performance. They come in a 78a durometer and will hold the road without wearing out or getting flat spots.

Never Summer's 64mm wheels come in a 81a and a 96a. The 81a is great all around wheel for the cruisers and the 96a is for the guy who is a little more aggressive and maybe wants to do some sliding.

All Never Summer Longboards will utilize custom NS Hardware and Risers.

All models will be available to ship to authorized Never Summer retailers and distributors as early as March 2007.

At once ordering available year round after launch.

Completes will retail for \$189.00-\$199.00

- Metro & Kroozer complete: \$189.00
- Swift, Norad & Eclipse complete: \$199.00

Decks will retail for \$89.00-\$99.00

- Metro & Kroozer: \$89.00
- Swift, Norad & Eclipse: \$99.00

All of our longboard wholesale and MSRP will be designed to offer keystone retail pricing.

STS/SK8 – We use our exclusive STS/SK8 fiberglass in all of our skateboards. This pre-hardened, pre-tensioned, layered laminate is the world's best fiberglass and only Never Summer has it.

Flight Core/SK8 – Utilizing our in-house wood working facility we manufacture a vertically laminated aspen core for our longer models. Borrowing from our proven core technology used in snowboards we have adapted our flight core characteristics to make a solid and responsive platform for longboards.

Bi-Lite/SK8 – The Bi-Lite/SK8 is a very snappy and light fiberglass that adds strength and response in our longboards.

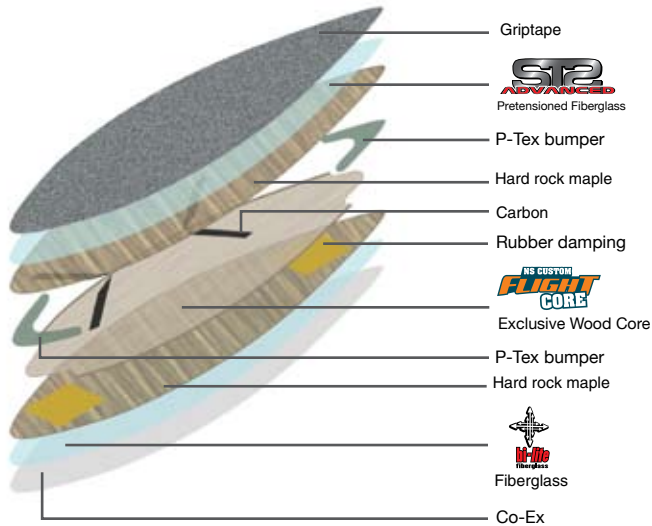

Hard Rock Maple – Our maple veneers are supplied by Great Lakes Veneer. These hard maple laminates are engineered for Never Summer to our exact specifications including quality, thickness and moisture content.

Rubber Damping is utilized in all of our longboards to absorb vibrations from the trucks to offer a smooth and stable ride and reduce high speed wobbles.

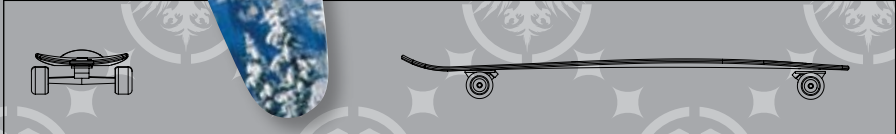

Kroozer Metro Norad Swift Eclipse

CONSTRUCTION: Eclipse, Norad, Swift

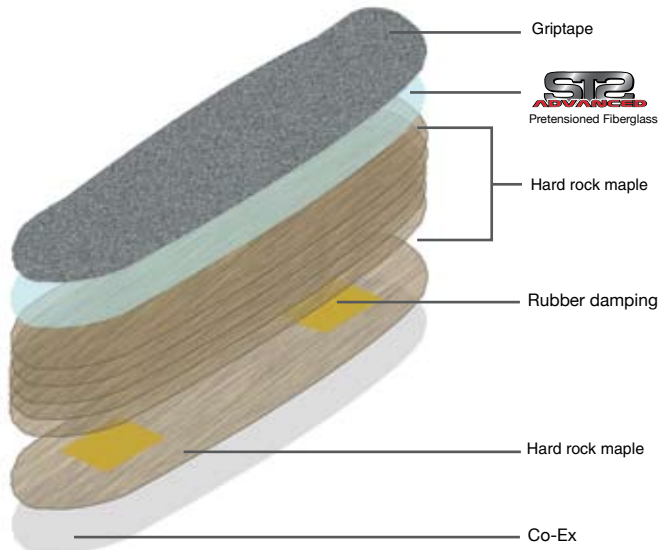

SWIFT

A pin-derived sidewalk cruiser will be available in a 46" and 48". Incorporating everything we have learned from manufacturing the best snowboards on the planet for over 15 years has led to this performance crossover longboard. The Swift has a wide platform with concave and camber to make for a snowboard like ride with smooth carving and stability.

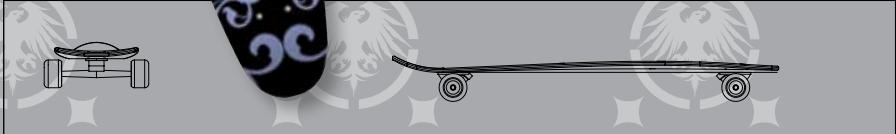

CONSTRUCTION: Metro, Kroozer

NORAD

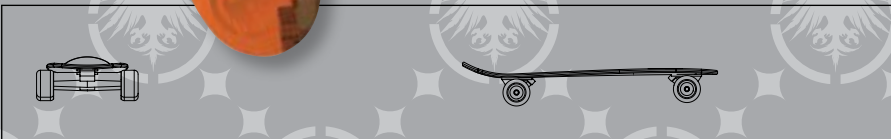

A cambered, concave carving board with a solid flex pattern and long wheel base. Carbon fiber, rubber damping, and composite materials give the Norad unmatched ride and response. The flex of the Norad means a tighter turning radius and increased energy in and out of the turns. This model will be available in 38" & 40" lengths.

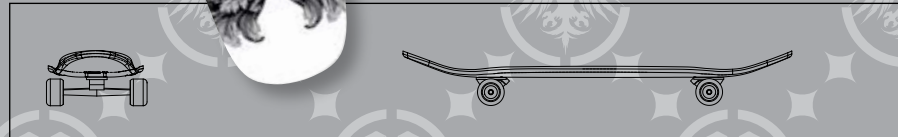

KROOZER

A mini skate deck for those not wishing to haul a four foot long skateboard around with them everywhere. This 26" model has a wide foot platform and short wheel base to provide good stability, yet is quick and agile. You can't find a skateboard from any other manufacturer that is this much fun!

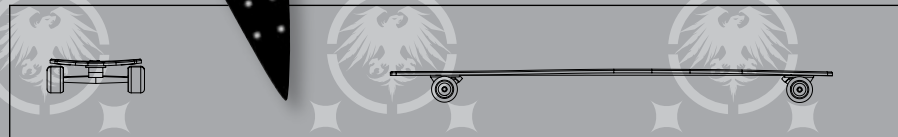

METRO

A slider/ditch/pool deck with a kicked nose and tail, wheel wells, and nice concave. This is the most versatile board in our line up. The Metro 34" board will get you around town but also be capable of throwing down in any ditch, pool or even little curb you come across.

ECLIPSE

A classic pin model in 47" and 49" lengths. Big and flat, this cruiser is the one that started it all. We have taken a classic and updated it utilizing our tested and proven technologies to make an ultra smooth and responsive pin. This is unlike the old planks you have ridden in the past. The Eclipse is the next generation of the pintail.
