

RONIX

TWO THOUSAND & EIGHT
IDEOLOGY

4 Founders, Designers, Owners and Riders

Starting out strapping into bungees, riding a phaser equipped, directional shape, tri-fin powered special. Thru time - admired, mocked and mimicked - until eventually the market was marketed with confusion. Which leaves us here... A clean slate - and friends with a similar sound. A non venting venture of artists, engineers, riders and others as owners making riding devices collectively crafted for the imagination of wakeboarding. Our axiom will always be based on products and tales of tomorrows riding. A chance to make a point, confront the norm, and answer the question why.

- Ronix

IBEX BOARD

Parks has the first super explosive/user friendly board with his new variable rail design found on the IbeX. Quicker transitioned turns and our snappiest 3-stage kick. Putting the rumor to rest that high-end chargers don't have to ride inconsistent.

ONE BOARD

Our best selling series combines a smooth transition carve and a classic 3-stage boot off the wake. The One series has a relaxed freeride feel with a surf inspired rail design, keeps this board riding higher on the water with the least amount of friction on the water.

MANA/DAHLIA BOARD

One of the most predictable boards setting an edge or leaving the kicker. A shape that doesn't feel like a fast board or a slow board. Our latest all purpose water drifter gets a solid buck whether you are loaded up or running flat into the wake.

FRONTIER BOARD

Not sure what style you are and just want an all around high-end board? The Frontier has a hybrid rocker like the Mana series but with a quicker response setting an edge and a smoother ride leaving the wake. The building block series to determine your riding style.

For more questions about our variable rails and heat formed orthotic kicks check out www.ronixwake.com to find your local authorized Ronix demo center. Worth the search - our products are only sold at exclusive specialty pro shops.

COVIN BOARD

The fastest board in our line. Designed for riders that are looking for a hard edge shaped designed to carry more forward momentum off the transition. A board you gain confidence with as you get on the gas.

COY BOARD

Not even Emily Copeland Durham rides the way guys do - finally a shape created for every aspect of the true rulers of the waterway. The flex, sidecut, rocker and rail were shaped for the characteristics of a women's specific design.

A series of boards that understand your body is working against the boat on a toeside edge. Designed with a stronger edge on your toeside, and a floatier ride on your heelside.

VAULT/KRUSH BOARD

Your snowboard season pass just got extended to the summer time. A simple wood core constructed deck for riders looking to rely on board control instead of fins for any true board sport connoisseur.

COVENANT BOARD

DARKCORE

Salve e benvenuti to the Dark Core story. From the foot hills of northern Italy lived Alessio, a craftsman of gondolas infamous for a troubled past until one day as folk lore would have it. Stumbling thru the streets he passed upon a good friend of the family, this pizano gave him a secret sauce not to just make a stronger craft but a lighter one. As years went on he was known thru the area of alluring tourist journeys with a smoother voyage, while oarsmen respected the travel of his lighter glide. Alessio's undisclosed ingredients were lost at some point during the fascist era, only to resurface decades later by our engineers. In honor of his past of scuro we present his lost secret, now stowed in our core.

DHV1

Available out of a 137 & 142 One mold. For info on how these boards ride turn to page 12/13.

FLEX

Fabricated of a hybrid carbon/glass weave and machined out of our new Dark core blank. The envy of all other cores has a snap you don't find in a conventional poured foam core. A stiffer lighter alternative sets a higher standard of maintaining a boards' structure thru the transition of a wake, rebounding with cushier impacts on bigger airs.

WEIGHT

Up to 20% lighter than our other secret squirrel core. If you can't pull a 7 because of the boards' slender physique you can at least impress everyone in the boat with how light it is.

8:12 CREW DEVELOPED

Our team spent this past year tweaking the flex while our engineers made sure it was stronger than any other construction we have ever built. More than just another construction – our team swears by it.

CSV1

Available out of a 138 & 143 Covin mold. Flip to page 16/17 for details on this series.

TYPE: VÖRN COLLECTION

IBEX BOARD

“After watching the sport change as well as my own riding, I want a board with as much explosive pop as I’ve ever had as well as a fluid turn and edge, mixed with a reasonable amount of forgiveness. My board is quite a bit wider with more rocker than our other high-end 3-stage shape (Danny’s One Board) – so that there is the recipe for the most pop. The IbeX has a ton of side cut allowing its wide profile to turn well and give me extra lift off the wake. The board has a softer bevel/sharp rail in the center blending to a harder bevel/vertical rail near the tip and tail for more natural speed. We didn’t jump into knocking out a board; this deck went through more testing stages than any of my other signature decks. Everyone says it, but I definitely mean it – this is the best board out there for my explosive style of riding. Oh yeah, and the graphics will get ya’ some action too.”

- PB

- × Sharper rail in the center of the board makes for a quicker turning board that is still more forgiving on landings with a softer underside bevel
- × Subtle vertical rail in the tail of the board so the board doesn’t burry the rail on big cuts
- × 10.6 degree/late kick staged rocker – the most explosive rocker in our line
- × 2.7”/2.8”/2.9” rocker – 134/139/144 cm sizes
- × Thin profile reducing swing weight
- × A clean bottom design – the board lands with more natural forward momentum so we can get away with cleaner bottoms
- × Wide profile – with this much surface area we balance it out with more sidecut than the rest of our other boards for the right amount of effective edge in the water
- × Artwork – Chrome top/chrome emblem/recessed chrome icon
- × 4 fiberglass 1.0” fins
- × Parks Bonifay approval

also pictured: metal flake silver R8 80 mainline & Volt handle

RELIX BOOT

Parks Bonifay's first signature boot on Ronix – designed for riders that want the most mobility combined with closed toe edge response. A lower cut boot with our softest heat molded liner – no excuses for a legit method air in a set of Reliks. The lightest boots with more side to side latitude - never compromise style.

- × Intuition liner – preformed heat moldable footwear that shapes to every aspect of a riders foot and lower leg
- × Softest durometer support, designed and ridden by P.B.
- × Mesh upper and lining improves mobility and saves weight without losing heel hold down
- × Double lasted boot removes error of dead space and pressure points
- × Made from wakeboard specific last - not a guess
- × Built in powerband moves a riders heel back as the laces are cinched
- × Removable J-Bars create a customized heel pocket
- × Silicon ink grips the heel down
- × New R.A.D. shock absorbing material in a triple density footbed
- × Softest density molded 3-D tongue

DANNY HARE

ONE

COLLECTION

ONE COLLECTION

ONE BOOT

Our most popular boots from last year, Danny Harf sat down with our engineers and added some new features to his stylish kicks. A super light weight medium density custom fit liner setup now comes with a memory shock absorbing material in the heel for even softer landings in our triple layered pads. The new dual density 3-D tongue puts more pressure on the top of the foot with an easier to lace molded tongue.

- × Intuition liner – preformed heat moldable footwear that shapes to every aspect of a riders foot and lower leg
- × Medium durometer support, designed and ridden by D. Harf
- × Double lasted boot removes error of dead space and pressure points
- × Made from wakeboard specific lasts – not a guess
- × Built in powerband moves a riders heel back as the laces are cinched
- × Removable J-Bars create a customized heel pocket
- × Silicon ink grips the heel down
- × New R.A.D. shock absorbing material in a triple density footbed
- × Dual density molded 3-D tongue

ONE BOARD

The shape that redefined variable rails featuring a round belly and a hard tip and tail, so it has both a relaxed and aggressive feel depending on where you distribute weight on the board. The round rails through the center make it hard to take that all too familiar digger and gives the board a quicker release off the wake in all water conditions. The hard tip and tail give the board a strong edge to drive up through the wake. Whether you are going out to do a session of soul turns or upgrade your travels attempting Danny's signature switch heelside 1080.

- × Shallow molded fins, softer bevel with a fuller mid rail sets the pace of this mellower paced freeride legend – as a rider's weight shifts back the variable rail transitions to a sharper rail and bevel in the tail – so the board can hook up with a harder edge up the wake
- × 10.4 degree/late kick staged rocker – the most explosive impact off the wake in our line
- × 2.5"/2.6"/2.7"/2.8" rocker – 132/137/142/146 cm sizes
- × Thin profile reducing swing weight
- × Clean center bottom design – if a boards lands fast, sometimes less is more
- × Artwork - UV clear top/gold emblems/pearl metallic white ink/hologram sticker based off Danny's watch
- × 4 fiberglass 1.0" fins
- × Danny Harf approval

also pictured: metal flake silver R8 80 mainline & One handle

Chad Sharpe
is the Affiliate Collection

AFFILIATE COLLECTION

CELL BOOT

Chad Sharpe's lightweight gnarly boots are the stiffest boots in our line. Comfort that you can dictate with our custom fit footwear – the Cell boot features more overall support than any of our boots. A rigid back design that helps a board react as quickly as you can control it for riders that like to get there quick.

- × Intuition liner – preformed heat moldable footwear that shapes to every aspect of a riders foot and lower leg
- × Hardest durometer support, designed and ridden by C. Sharpe
- × Double lasted boot removes error of dead space and pressure points
- × Made from wakeboard specific lasts – not a guess
- × Built in powerband moves a riders heel back as the laces are cinched
- × Removable J-Bars create a customized heel pocket
- × Silicon ink grips the heel down
- × New R.A.D. shock absorbing material in a triple density footbed
- × Dual density molded 3-D tongue

also pictured: black R8 80 mainline & Totem handle

COVIN BOARD

Our quickest series generates more board angle and glide into the wake than any other style of "fast" board Chad has ever ridden. This new style of charger has a sharp rail in the belly for speedy edge transfers and more of a vertical sidewall in the tail so the board sets a strong edge without burying it. The Covin is a hard edging deck that doesn't sit super deep in the water which can create too much drag and effective edge with the water. Instead the speed comes from the edge angle, increased glide, and a tight load line that creates additional lift.

- * Variable edge sharp to vertical rail reacts quicker than any of our other boards
- * 9.1 degree/late kick continuous rocker – less pitch to carry more speed out into the flats
- * 2.5"/2.6"/2.7" rocker – 133/138/143 cm sizes
- * Thin profile and stiff glass layup
- * Simple bottom shape - no need for deep center concaves or beams if a board has enough forward momentum
- * Artwork – soft touch black top/black metal emblems/black metallic ink/clear glossy ink/heat sensitive ink
- * 4 fiberglass 1.0" fins
- * Chad Sharpe creation

The Coy Collection
BY Emily
Copeland
Durham

COY COLLECTION

COY BOARD

A deck designed the way the real rulers of the water ride. This women's specific shape wasn't designed to set a steep edge load – the line load gets too tight then a rider has to let off edge before the wake. Instead of the angle generating the speed – this ride has a more vertical sidewall allowing the tail to ride higher. Since the tail rides higher, more speed is generated from reduced friction and increased glide, not the board angle. Riding with less resistance – plan to carve and boot with less work.

- * Variable edge sets a quick predictable initial transfer with the less drag hitting the kicker
- * 9.6 degree/medium kick hybrid rocker takes smooth/fast/explosive and throws em' into one high-end ride
- * 2.6"/2.7" rocker –132/137 cm sizes
- * Thinnest profiled board in our line reduces swing weight
- * Side channels and tip/tail tunnels aid the carve
- * Artwork - UV clear top/gold emblem/pearl metallic white ink/inlayed stones
- * 4 fiberglass 1.0" fins
- * Emily Copeland Durham endorsed

RISE BOOT

Emily's cut, flex, lean and look in a closed toe special. High-end women's footwear shouldn't just be a scaled down version of the dude's. Unconventional custom orthotics designed specifically for the first lady of the water.

- * Intuition liner – preformed heat moldable footwear that shapes to every aspect of a riders foot and lower leg
- * Softest durometer support, designed and ridden by Emily Copeland Durham
- * Double lasted boot removes error of dead space and pressure points
- * Made from a women's wakeboard specific lasts - not a guess
- * Built in powerband moves a riders heel back as the laces are cinched
- * Removable J-Bars create a customized heel pocket
- * Silicon ink grips the heel down
- * New R.A.D. shock absorbing material in a triple density footbed
- * Softest density molded 3-D tongue

RONIX

**KAIMANA
COLLECTION**
DESIGNED BY
ADAM ERRINGTON

KAIMANA COLLECTION

KAI BOOT

Inspired from our friends on the islands with a hemp outer shell and an ergonomic foundation. With a Kai boot, 8 minutes in a shop and a cooker takes care of year's worth of riding during the ol' break in period. For any riding style looking for comfort, ease of entry, and closed toe performance. Haole's you should probably look into another boot.

- × Intuition liner – preformed heat moldable footwear that shapes to every aspect of a riders foot and lower leg
- × Softest durometer support, endorsed by Adam Errington
- × Double lasted boot removes error of dead space and pressure points
- × Made from wakeboard specific lasts
- × Built in heel reinforcement

also pictured: black/gold Core mainline & North handle

MANA BOARD

The alternative to stereotypes with the everyday rider in mind. A legendary new board and rider in the making. Adam Errington entered his first year onto the pro scene making his way to podiums with his own signature skate influenced style, while working on the design of his first deck. A shape that you can't help but ride better on, whether you have a progressive cut, or come in flat to the wake. The Mana is always in control – even when you're not with a hybrid rocker, new variable rail that isn't too fast, slow, edgy or mellow.

- × A slightly fuller center rail with a soft bevel riding slightly higher on the water with a moderate transition to a sharper rail in the ends for a solid edge hold thru the wake
- × 10.8 degree/medium kick hybrid rocker – a solid boot regardless of weight distribution or how much speed a rider carries
- × 2.7"/2.8"/2.9"rocker – 134/138/142 cm sizes
- × Artwork – soft touch ink/sand paper clear ink/center emblem
- × 2 fiberglass fins
- × 2 deep molded-in fins
- × Adam Errington design

RETENTION DEVICE INGREDIENTS

The difference between ending your session from being tired, and when your feet hurt.

THE FOUNDATION

Before you work on materials, colors, or lacing – it all starts with a last. Determining the correct amount of toe spring, forward lean, width, and height of a rider's foot is the most critical element in constructing a properly fitting boot. A men's and women's version is available in every size shaped to every aspect of a rider's foot and lower leg based on extensive R&D – not guess work. The lasting process creates an exact fit between your foot and the liner. Molding the boot shell with a second last couples the liner and shell together perfectly. This process of double lasting means the boot has the most responsive and direct control over your board, by removing dead space and pressure points, and making new boots fit like old ones.

3-D TONGUE

1

A new preformed tongue that is molded to match the curve of our liners.

SINGLE

A softer tongue with increased mobility is available on Relik & Rise boot.

DUAL

Stiffer version applies more pressure on the foot for quicker heel toe response available on Cell & One boot.

ARTICULATING CUFF

2

Allows the foot and leg to flex independently of one another, as they naturally do. This provides the best fit without taking away any mobility.

POWERBAND

3

Checks your ankle like a dog on a leash.

DOUBLE SEWN CHASSIS

4

Stress comes from where the boot meets the board connection. Every Ronix boot is double stitched sewn on this stress zone. Drop your hard earned cash, plan a long weekend wakeboard road trip - know our boots are ready for the journey too.

5

INTUITION LINERS

Intuition's authentic Ultralon® liners just fit better right out of the box and custom mold better than any other type of liner available. Ronix and Intuition have set the standard for blending comfort performance into your footwear. Our Liners are made from thermo-forming closed cell foam. These tiny cells of bubbles create a high cross linkage between molecules in each cell wall. This means that the foam does not allow gases to migrate, which would change the shape of the foam. All of this results in the ability to mold the foam into a specific shape when heated and the foam will retain that shape when cooled with reduced heat-related shrinkage. Intuition foam can also be re-heated and molded more than once without damaging its structural integrity or quality. The ultimate in high quality adapting liners, resistant to packing out.

AEGIS

New for this year is a microbe shield on the inside and the outside of our liners – a rather fancy way of saying our boots don't stink, deteriorate, or create bacteria. Fight the funk.

6

J-BARS

Not everyone has cankles – these removable bars make a good boomerang and a smaller heel pocket.

7

SILICON INK

If the J-Bars didn't do enough for your heel hold down this added ink grips in the heel pocket where you need it the most.

8

R.A.D. SYSTEM

Really A.wesome D.ampening – Just because our marketing department is stuck in the 80's doesn't mean our engineers are. A new, high memory, shock absorbing foam that forms to your heel and creates some cush on big landings. You owe it to your feet.

THE COOKER

Flat foot, high arch, narrow heel, or cankles - whatever dimension your foot is, our thermoformed liners were made to be cranked up to 120 degrees Celsius and custom cooled to a rider's hoof. Now there is a solid reason why you don't have to share your boots.

FOOTWEAR 

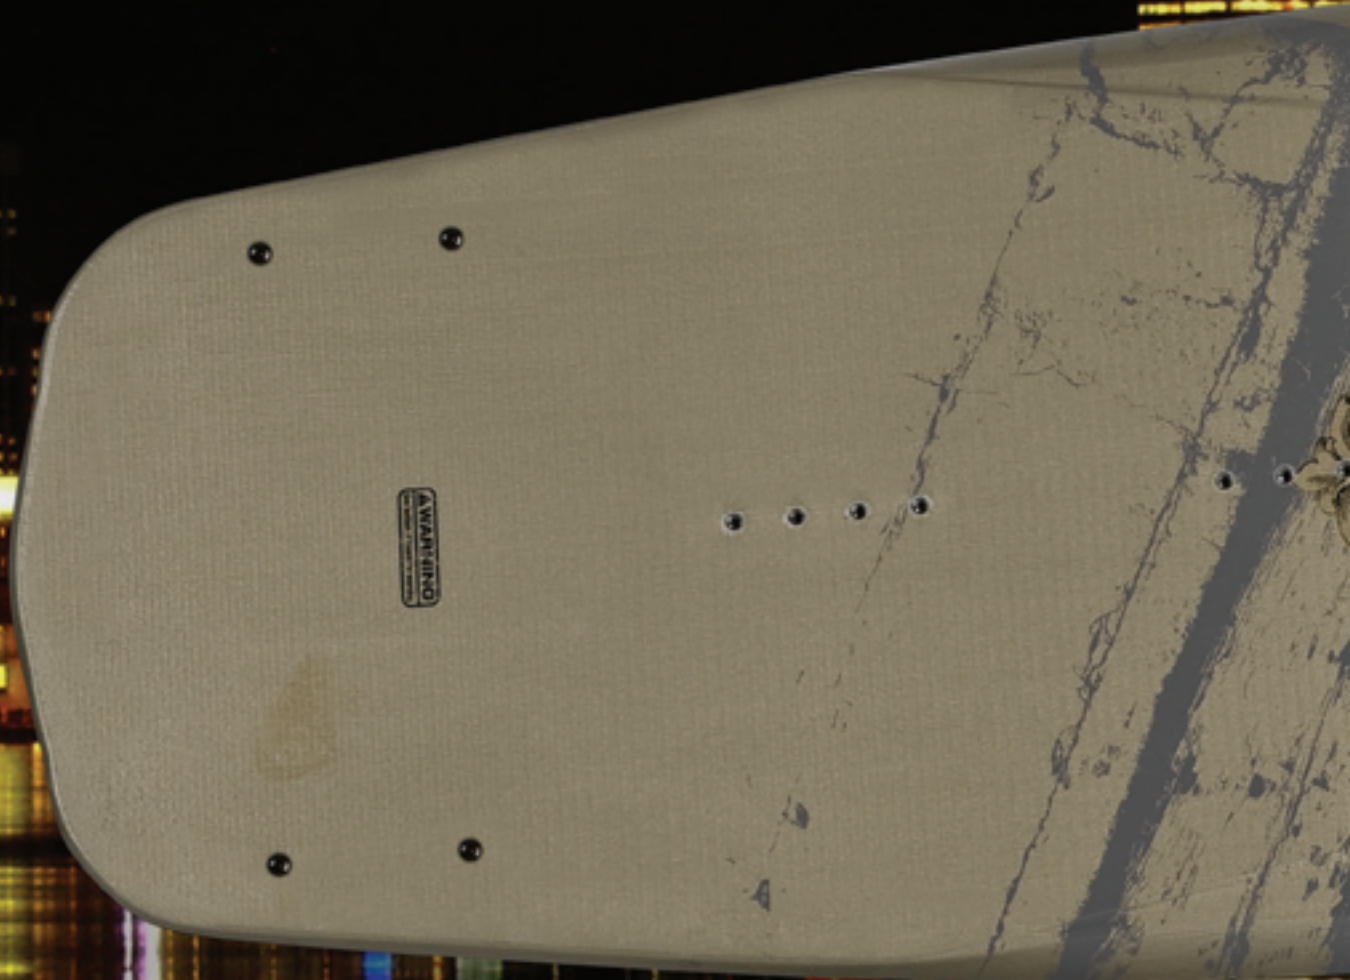

ASCOOT SERIES

FRONTIER BOARD

Determine your own style – don't let a board do it for you. A toned down version of the Covin's edge hold with a more vertical sidewall tail preventing this shape from rolling over on rail as far. A faster version of the Manas' hybrid rocker with increased glide over the water. The Frontier board generates speed from an idle continuous arc in the middle length of the board combined with a kink in the ends. This style of hybrid arc means riders that have a tail heavy body position will notice the speed off the wake from the continuous rocker. Riders with a centered-weight style rely on the bend in the tip/tail of the board with a more straight up snap off the wake.

- × Accelerated edge transfer from the sharp center rail blending to our most vertical sidewall riding higher in the water in the tail with reduced drag
- × 9.6 degree/medium kick hybrid rocker – explosive snap from a fused staged/continuous rocker
- × 2.5"/2.6"/2.7" rocker – 132/137/142 cm sizes
- × Slightly thinned profile
- × Simple bottom shape designed to land with more forward momentum
- × UV clear top/champagne metal flake
- × 4 fiberglass 1.0" fins and 4 molded stabilizers
- × Designed by our developmental team

OXFORD BOOT

New open toed offerings prove that not all of our high-end boots have to keep their toes warm. A durable high memory foam alternative ready for the wakes encounters. Stylish kicks ready to scout the streets of Ascot, and stomp a cab backside 5.

- × New Onyx comfort fit open toe liner
- × Articulating overlay helps transfer more energy to your ride
- × Built in J-Bars improve heel hold down
- × Semi adjustable toe fitting multiple sizes

Reunion SERIES

VAULT BOARD

Redefining the versatility of board shapes for toe/heelside demands. A ride that takes into consideration that your body is working against the boat on your toeside, yet rides higher with a quick release on your heelside.

- × Toeside rail is thinned out to sit deeper in the water along with a wider profile with less sidecut riding higher up the wake with more control
- × Heelside rail has a more vertical sidewall with less resistance on the water, and more sidecut for a quicker release
- × 9.5 degree/medium kick staged rocker – more angle designed for smaller wakes or riders that just want the extra straight up hangtime
- × 2.1"/2.3"/2.4"/2.5" rocker – 128/134/139/144 cm sizes
- × Artwork – sublimated top
- × 2 poly 1.3" fins and 4 molded fins
- × Designed by our developmental team

DIVIDE BOOT

Save your energy for after you have jumped off the swim deck. A streamlined easy entry, adjusting, durable one piece constructed performer that is also our most inexpensive model. Durability where respect isn't required and comfort for a session that ends when you want it to – not when your feet do.

- * One piece construction makes a super easy entry design made with materials to withstand the elements
- * Built in J-Bars improve heel hold down
- * Our most adjustable boot fits the family's sizes
- * Admix foam lining, formulated for comfort and easy entry

Back Stage Series

DAHLIA BOARD

From the moment you jump off the dock you will know what we mean by versatility. A shape that you can't help but ride better on whether it's a harder progressive cut, or coming in flat to the wake. The Dahlia is always in control – even when you're not with a hybrid rocker, new variable rail that isn't too fast, slow, edgy or mellow. A more explosive alternative to Emily's Coy board.

- × A fuller center rail with a soft bevel rides slightly higher on the water with a moderate transition to a sharper tip/tail for a solid edge hold thru the wake
- × 10.8 degree/medium kick hybrid rocker – a solid boot regardless of weight distribution or how much speed a rider carries
- × 2.7" rocker
- × Artwork –UV clear top/iridescent glitter
- × 2 fiberglass 1.0" fins
- × 2 deep molded-in fins

HALO BOOT

Ladies leave the boys at home grab your favorite mix of tunes and set the wake the way you like it – not them. Catch up on old times, session a day on the water (hopefully also on our self proclaimed wakeboarding day 8/12), oh and grab a pair of high memory lined, durable Halo's while you are at it too. You are probably going to be in trouble for snaking the boat so you might as well spend a couple bucks and grab a pair of our new mid-high end snowboard style lined comfy open toe boots.

- × New Onyx comfort fit open toe liner
- × Articulating overlay helps transfer more energy to your ride
- × Built in J-Bars improve heel hold down
- × Semi adjustable toe fitting multiple sizes

MUSE SERIES

KRUSH BOARD

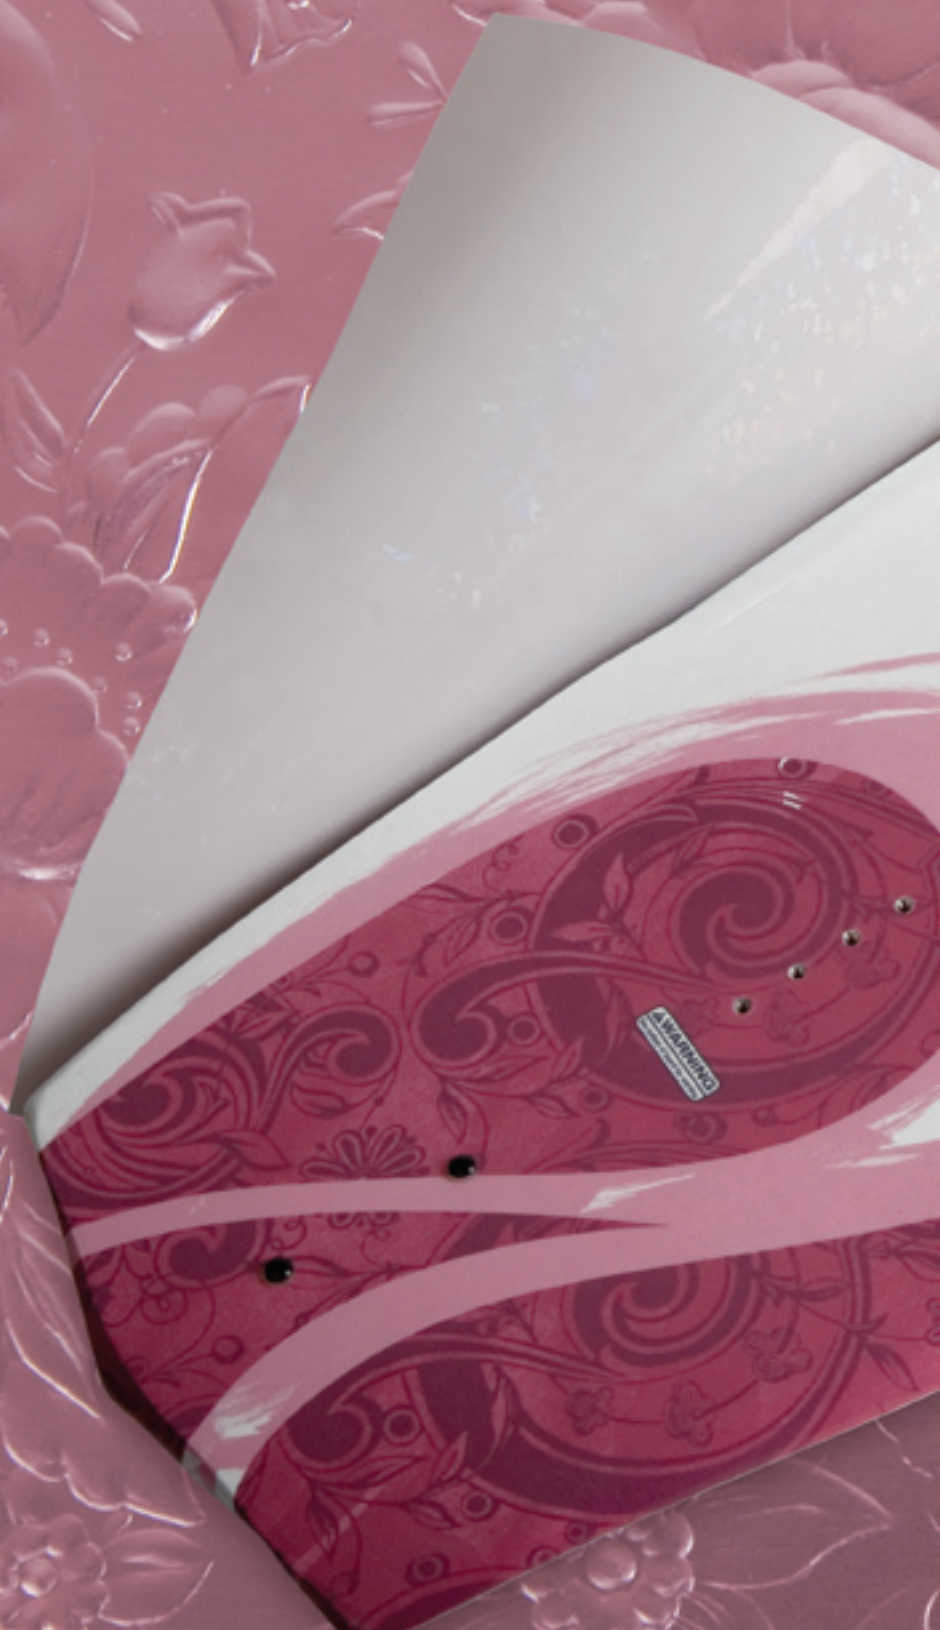

A line of boards that understand your body is working against the boat on a toeside carve. Designed with a wider profile - standing higher up the wake, requiring less speed, along with a hard edge profile for unsurpassed traction. The heelside offers an accelerated edge transfer from the sharp center rail blending to an increased vertical sidewall. This taller rail increases the glide mixed with more sidecut for a quicker release off the wake.

- × The standard in toeside/heelside versatility
- × 9.5 degree/medium staged rocker - an arc designed for small wakes or riders that just want the extra straight up hangtime
- × 2.1"/2.3" rocker - 128/134 cm sizes
- × Simple bottom shape designed to land with more forward momentum
- × Artwork - Pearl flake top
- × 2 poly 1.3" fins and 4 molded fins
- × A Mike Ferraro design for a universal style of mid to high end abilities

LUXE BOOT

Our most affordable value will get you into the enjoyment over the kicker, and this trustworthy ride will keep you into it. If you don't agree that they are worth every penny than this next sentence would be false. A fully loaded easy entry, durable one piece constructed adjustable boot winning the "price to fit" award. Remember we wouldn't lie to you.

- × One piece constructed durability also makes a super easy entry design
- × Built in J-Bars improve heel hold down
- × Our most adjustable boot fits the family's sizes
- × Admix foam lining, formulated for easy entry and comfort

onix
ONE28KTush

COVENANT FLEXBOARDS

COVENANT FLEXBOARD

A carver that likes ride at its own pace. This summertime alpine creation designed by Pat Panakos has the flex and carve of your favorite stick in a foot of fresh. A mellow inside radius with the only board in our line that has torsional flex which acts as the fin when a rider sets a snowboard inspired edge. Not to claim, but we think we have the magical blend of soul turns and a release off the wake without getting hung up.

- × A super lively Maple wood core flexes the way a snowboard does
- × Subtle inside radius mixed with torsional flex pattern means the profile creates the edge hold into the wake – not fins or any bottom features
- × Unsophisticated shape for riders that understand how to ride over their board
- × A must have in the quiver for any board sport connoisseur

Kanriel

Konix

Konix

A person is captured in mid-air, performing a trick on a wakeboard. The person is wearing a dark harness and shorts. The wakeboard is dark with a red and white graphic design. The background is a bright, hazy sky. The text is overlaid on the right side of the image.

ZARIEL WAKESKATE

The heavy weight guardian of the water is coming in at over 13 lbs. Reed Hansen needed a stockier skate for the board control he was looking for on the water and leaving it. Ronix spent the last two seasons designing the first ever compression molded wood wakeskate – for the buoyancy of your favorite wood deck, and the durability of that wakeboard you have had in the garage since 97'. This bi-level shape creates a consistent, quicker swing weight than a traditional skate.

- × Concave – starts in the center of the board and then tapers out the ends for a more controllable flip
- × Rocker – hybrid arc means more time on the water and less in it
- × Compression molding – the most durable wood skate out there
- × 2 Zariel .8" wakeskate specific fins
- × Reed Hansen designed and endorsed

BOARD
& BOOT
SIZING

Rib Huggers

This contact resistant, lightweight comfy little hot rod might not have the household brand name tagged to it – or some water resistant built in boom box. Leaving us without the history tag, or the hi-fi sales pitch – instead we will dig a little deeper into the inner makings. A fashionable solution to the daily wakeboard requirement. You can't put a price tag on that kind of sex appeal mixed with a socially responsible conscience of reducing the impact on those untimely eye peelers.

Type: Vörn available in black, cloud break
Sizes S – XXL

Coral available in dusty rose
Sizes XS – XL

GRIPS & GIZMOS SELECTION GUIDE

HANDLES

C3 Weave – Grab it don't slap it. A 100% carbon handle construction with all of the freedom during handle passes. Over extend your passing hand - no worries you still won't smack our most rigid outline.

The Loop – The new spinning assault weapon of war. A traditional aluminum bar handle with built in side loops preventing a handle from collapsing doing a good ol' handle rotation. The 812 crew asked for it and we built it.

Prequel – Testing in our lab at a breaking point of 1700 pounds – the framework of this aluminum bar handle has all of the strength of the others. Designed for riders that don't need the performance advantages of an anti roll system on handle passes.

GRIPS

Hydra – The hydra grip has suction cups attached to a mesh grip so there are no more excuses for popping the handle with our tackiest material. Hercules got Hydra with a cheap shot back in the day, but we think our version would have taken him out for sure. If you are out there we want a rematch.

Hide – This outer material has a softer feel, when wet it has the tackiness of an old school rubber handle. Don't worry vegans it isn't really made out of our friends down at the farm.

Szeto Blend – A machined blend of primo EVA. This batch has a slightly rougher texture than our soft forming foam.

The Chefs EVA – The more affordable value of foam. Made out of a similar compound as the Szeto – just cooked instead of machined, to mold the form of a grip. Doesn't quite have the clamp as the Szeto - but a similar soft finish.

TPR – Our most affordable hold is the EVA alternative. Made from one of our many exclusive new materials with a soft, durable rubber compound.

RECALL FOAM

Underneath some of our grips is a new memory material that will actually form to your fingers when you snatch it.

MAINLINES

RX 80 – A glow in the dark mainline with a urethane coating, and a dyneema weave. Means more time for hitting transfers instead of undoing knots.

R8 – A roomy tangle free 80 footer and a similar construction to the RX – just not as nocturnal.

Core – Super stiff, 24 strand dyneema weave with an inner neoprene core.

Solin – Similar tensile strength to the core series just doesn't have the swimming skills.

Shell – Tight braided Solin constructed line without the jacket.

PE – A forgiving alternative for recreational riders.

SENECA HANDLE

VOLT HANDLE

SENECA & VOLT

- × C3 Weave frame
- × 3mm diameter recall foam and 1mm thick Szeto grip with die cut surface grip
- × Polyurethane chip resistant clear coat
- × Handle comes with a non-stretch 24 strand Tensilon (abrasion resistance) rope
- × Volt handle is constructed after a cube shape grip in mind
- × Available in single or double "T" handle

ONE / MOANNA / TOTEM

- × Loop frame
- × *3mm thick recall foam and 1mm diameter Szeto grip with die cut surface grip
- × **Hydra grip is sewn to 5mm recall foam
- × ***Recessed finger grooves
- × ****Added bumps
- × Handle is strung with 100% dyneema fiber 16-strand rope
- × Ridden by Danny Harf, Chad Sharpe and Emily Copeland Durham
- × Available in single or double "T" handle

*Available on One and Moanna

**Available on Totem

August 12th - Wakeboarding Day

Rise and shine chicks and bros. All right so hopefully you just read a little bit about us, we have a ridiculous (that is a good thing) team, heat formed boots, and some lightweight snappy boards. Not important right now, we are getting off track with why we reserved this soulful piece of propaganda for the closing credits. In today's age it seems the day is getting a little shorter - campfire stories of the perfect session can too easily be replaced by updating the ol' my space account. Not the case on August 12th - it shouldn't be on most days, but trust us on 812 you need to be sideways. A day to get back to the purity of why we all jumped off the swim deck for the first time, or the adrenaline rush of trying to do the infamous trick that rattled your dome last season.

So here is what you gotta do, and you might not like it when the alarm is cranking at quarter to 5, but you need to get up at the crack of dawn and carve some fresh tracks. Make sure your cell phone is nowhere in sight, laptop, video games and most other "modern conveniences" that you can think of are sidelined for what should be front and center. A couple of 5 gallon buckets, boat keys, the perfect setup. Grab a couple of your favorite chums and make a day out of it. Hit that perfect left hander at the end of the lake, finish tapping screws on that 13 degree pitched A-Frame. Remember no cell phones - text messaging can be evil, spend that time instead coming up with a nickname for your buddy that bailed out last minute.

Send us your most legendary moment. Snap a pic or a video clip and email us at 812@squareoneco.com. Write a story about what you did that day that you have never done in wakeboarding. 3 of the most, absurd, funny, maybe even heart warming stories (you never know, you might find your soul mate out on the currents on our self proclaimed official wakeboard day) will be published courtside on our website along with a free set up signed by Emily, Parks, Chad, or Mr. D.Harf.
