CONSTRUCTION

(BASEPLATE)

DESIGN

GENETIC BASE

(SUPER DIAMOND, FEEDBACK & DISTORTION)

Hours upon hours of relentless research were applied to the form & movements of the foot using advanced sciences and ergonomics.

The inner portions of the baseplate were designed thinner than the outer. This greatly improved the response and feel of the binding while performing technical maneuvers.

The urethane dampeners utilized in the baseplate greatly reduces shock applied to the board and allows for a true board flex without any flat spots.

They also come with a pair of higher density urethane dampeners, that can be swapped out to customize the feel to your style of riding.

SMOOTH BASE

(SUPER TITAN, TITAN & TITAN RK)

A simple design that shed all its excess material. The Smooth Base is designed to wrap around your boot for a seamless fit which helps reduce stress while riding.

We offer this baseplate in 2 different nylon densities to accommodate any style of riding.

COMFORT BASE

(SUPER EMBLEM, EMBLEM & GEM)

Completely reconstructed for light weight performance.

This baseplate is designed a bit taller for increased stability. It's perfect for all levels of riding.

SIMPLE BASE

(PREMIUM)

A simplified version of the COMFORT BASE loaded with enough adjustability functions needed for riding.

A soft flexing base was chosen for maximum shock absorption which helps utilize the boards flex to the fullest.

MATERIAL

SUPER CARBON BLEND

(SUPER DIAMOND)

Utilizes a special domestic virgin nylon carbon blend known for its reliability.

Superior in shock absorption, this is the ultimate material that excels in response & light weight.

With its precise edging & board control ability, it is perfect for half pipe & boarder cross riders.

The rotary disc utilizes a shock absorbing nylon with a 45% glass fiber blend.

SUPER BLEND 45

(FEEDBACK & SUPER TITAN)

A shock absorbing nylon reinforced with a special 45% glass fiber blend which assists the rider in quick power transfer.

The rotary disc utilizes the same shock absorbing nylon with a 45% glass fiber blend as well.

PERFORMANCE BLEND 30

(DISTORTION, TITAN RK & TITAN)

Infused with a 30% special glass fiber mix, it is an all-round blend that performs in any situation.

This base helps pull out your riding style to its fullest potential.

The rotary disc utilizes the same 30% glass fiber blend with the shock absorbing nylon.

HYBRID BLEND 30

(SUPER EMBLEM & GEM)

Flexible, yet retains excellent response & handling.

Infused with the 30% glass fiber blend.

The rotary disc utilizes the same 30% glass fiber blend with the shock absorbing nylon.

COMFORT BLEND 15

(EMBLEM & PREMIUM)

With a soft flex, it is light & stable.

Utilizing a 15% glass fiber blend, it has a perfect flex for beginners & light weight riders.

The rotary disc utilizes the same 30% glass fiber blend with the shock absorbing nylon.

(HIGHBACK)

DESIGN

F-TECH ASYMMETRIC HIGHBACK

(SUPER DIAMOND, DISTORTION & FEEDBACK)

The asymmetrical highback of the FEEDBACK is constructed to be soft and flexible outwards but stiff inwards.

It is designed towards freestyle riding in its regular setting but by swapping the highbacks from left to right and vice-versa, the bindings can be set to a free-riding style.

We also added a simplified symmetrical lean adjuster to maximize the material to its fullest potential.

APEX HIGHBACK

(SUPER TITAN)

This highback is a 1CM taller than the PERFORMANCE HIGHBACK which assists in better power transfer to the toe and heel.

The top of the highback is rounded to ensure a seamless fit which allows it to respond to the rider's every move.

PERFORMANCE HIGHBACK

(TITAN & TITAN RK)

This highback has the most forward lean in the FLUX line up.

The top of the highback is almost flat to allow for ease of lateral movements, giving the rider more range of motion.

FLEXIBLE HIGHBACK

(SUPER EMBLEM)

An improved version of the COMFORT HIGHBACK, we tuned this highback with more emphasis on torsional flex.

It features cutouts that allow for a soft, forgiving flex throughout while shedding weight in all the right places.

COMFORT HIGHBACK

(EMBLEM)

This highback specifically constructed to relieve stress on the foot while retaining a snappy response.

It is designed to improve board control & wrap the boot like a glove.

EZ HIGHBACK

(PREMIUM)

With easy positioning and a soft flex, this highback is a perfect match for beginners and lightweights.

It is specifically designed from the ground up to alleviate stress with a forgiving flex.

CHAIR HIGHBACK

(GEM)

A completely new highback specifically designed for the ladies utilizing all the technology that FLUX has to offer.

By strategically placing slots toward the top of the highback, we were able to achieve a highback that transfers power to the whole surface rather than one point.

This allows for a natural flex that differs from urethane.

MATERIAL

SUPER TOUGH NYLON PLUS

(SUPER DIAMOND)

Glass fiber produced exclusively for FLUX blended with a super tough nylon which excels in vibration & shock absorption.

This material helps improve response for precise carving and is an excellent choice for aggressive riders.

SUPER TOUGH NYLON

(FEEDBACK, SUPER TITAN, TITAN, SUPER EMBLEM, EMBLEM, PREMIUM & GEM)

The FLUX exclusive super tough nylon was produced to specifically excel in vibration reduction and shock absorption. This material is designed to mold perfectly to the boot, allowing the rider to control their board with ease while in the pipe or park.

URETHANE

(DISTORTION & TITAN RK)

A completely new highback innovation that makes use of the same material used in skate wheels.

Our secret recipe of urethane provides flex and tweakability where you want it and support and stability where you need it. Greatly increases the range of motion in your feet so you can use your ankles, similar to skating & surfing. Easily style out your poked out indies & tweaked out methods.

(ANKLE STRAP)

DESIGN

ULTRA RESPONSE STRAP

(SUPER DIAMOND, FEEDBACK & SUPER TITAN)

Utilizes the light & tough TPE core. Highly responsive & directly transfers the riders power in an instant. It offers excellent heel to toe transfer during high speed maneuvers as well as precise control in the air.

The best choice if you're looking for a responsive ride.

STYLISH STRAP

(DISTORTION, TITAN RK, TITAN, GEM, SUPER EMBLEM & EMBLEM)

Utilizes the tough & flexible TPU core. This strap forms easily and softly to your boot. Helps you jib & ride powder exactly as you envisioned without any stress on your ankles. Perfect for the rider who wants to shred in style.

FEATURES

LOW PROFILE RATCHET BUCKLES

The ever popular LOW PROFILE RATCHET BUCKLE carried over from last season. A 100% FLUX original construction. They are durable & smooth with an excellent hold and feature a completely different design & construction from other companies. These ratchets are featured on all of our models.

L-GUIDE SYSTEM

Stays flexible even when the ladder is inserted and doesn't apply stress while riding.

Plus, it keeps those pesky straps and ladders out of the way.

F-TECH 3D ANKLE STRAP CONSTRUCTION

Designed with the concept of a strap that won't hurt even on a bare foot. Produced in a 3D construction using 2 different densities of TPE & TPU.

UU FIT

(US PATENT: 6604746)

A patented FLUX original system. By inserting and mounting the strap-ends between the heelcup and highback it allows the ankle strap to wrap the boot 360 degrees, no pinching at all. It is unlike traditional ankle strap interfaces that push down on the boot from above by being mounted on the outside of the heelcup.

FLUX TOE MASK

(US PATENT: 7278651, JAPAN: 4048178)

FTM w/ L-GUIDE SYSTEM

Designed with 3D construction to conform to any and all boot shapes. The core is constructed of 2 strips of TPE or TPU which locks in the boot and doesn't slide off.

The L-GUIDE conceals the ladder in a clean silhouette without changing the stiffness of the strap.

FTM

A basic and simplified version of the patented FLUX TOE MASK strap without the L-GUIDE.

Spawned out of the necessity for a high quality and lightweight binding. The GENETIC BASE on the Super Diamond is constructed with the lightest and strongest elements found in diamonds. Only a minimal amount of power is needed to carve due to its excellent response characteristics. It possesses precise board control needed for half pipe and boarder crossers. Also perfect for riders that enjoy ground tricks for a quick and snappy feel. The subtle matte white finish adds a touch of class above all others.

**WE HAVE URETHANE!
HIGHBACKS POPPING
OUT OF
SKATE WHEELS**

Oozing with street style and flair the Titan RK is the newest cool kid on the block. It utilizes the performance blend 30 nylon in the SMOOTH BASE and is combined with the urethane highback for a skate influenced style which makes it possible for an increased range of motion. Practically a bible, the R.K. gets its name by paying respect to [ROAD KILL] from the early 90's. With super vivid colors you won't need to do a double take to know they are "RK's".

girls
like to be
special

The wait is finally over for a female specific model from FLUX. After months and months of on-snow testing of women's strengths & features, we introduce the GEM.

By strategically placing slots toward the top of the highback, we were able to create the CHAIR HIGHBACK, which transfers power to the whole surface rather than one point.

The COMFORT BASE is infused with a special 30% glass fiber blend.

This baseplate, paired with the CHAIR HIGHBACK gives the GEM a natural flex & feel.

This is the birth of a binding that answers every need of all lady riders. Perfect for the girl that wants to charge, yet be fashionable & graceful on the slopes. FLUX collaborated with Chanelle Sladics to make this binding possible. Thanks Chanelle !
