CHOOSING A SNOWBOARD

There are many factors to consider when choosing a snowboard; riding style, height, weight, foot size, etc. This chart categorizes our boards by riding style to help make your decision process a little easier.

SELECTION CHART

PIPE & PARK / FREESTYLE / FREERIDE / BIG MOUNTAIN

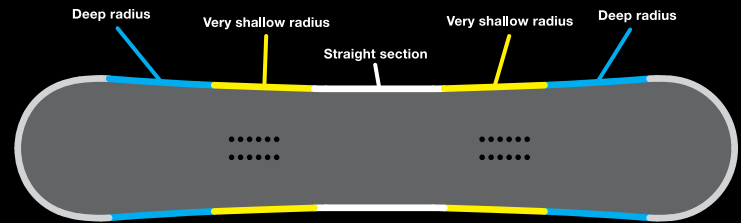

TITAN & TITAN TX
PREMIER F1-R
LOTUS-R (women)
HERITAGE-R & HERITAGE XR
LEGACY-R
SL-R
INFINITY-R (women)
EVO-R
REVOLVER-R
PANDORA-R (women)
CIRCUIT-R

Rocker adds fun, camber delivers high speed stability. Like no other.

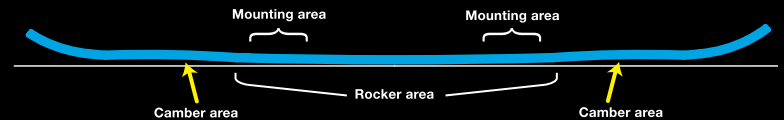

R.C. Technology & Vario Power Grip sidecut!

(pat.pend.)

Vario Power
Grip sidecut >

R.C. Technology >

Never Summer's rocker designed lineup featuring R.C. (rocker & camber) Technology and Vario Power Grip sidecut geometry combines a rocker freestyle feel with all mountain high speed performance. Unlike older generation rocker designs that may perform well in powder and parks but lack stability and edgehold when riding fast, our combined rocker and camber (R.C. Technology) design destroys anything in its path from parks to steeps, to powder and high speed cruisers. This new technology blends an NS custom rocker profile with separate camber areas at each end of the board, providing unmatched power and snap out of turns. This also provides better board tracking for high speed stability and ollie performance. The Vario Power Grip sidecut works perfectly with this new design by adding increased edgehold precisely where it's needed most; from 2 inches outside of each binding, inward towards the center of the board providing added control and response in any condition.

QUALITY, HAND-CRAFTED SNOWBOARDS SINCE 1991

Never Summer's reputation of quality and durability began in the early years of snowboarding. Designing and building snowboards since 1983 has given us years of experience in testing and perfecting our snowboard designs and construction methods. We continue to work very closely with the world's leading raw materials manufacturers and engineers to make sure every Never Summer snowboard is the most durable, high performance board on the planet! Each snowboard is carefully handcrafted in our

Denver, Colorado factory to precision tolerances. As a result, only the world's best snowboard shops proudly sell our products. Focusing less on excessive promotion and hype, and more on using the highest quality materials, craftsmanship and customer service has made Never Summer the world's premier independent snowboard company.

—Tracey and Tim Canaday

MATERIALS&CONSTRUCTION

NS Custom Flightcore

Never Summer's exclusive CUSTOM FLIGHT CORE is the most technically advanced core system we've ever used. Designed and built in NS's woodcore facility, these cores fuse premium hardwood and ultra light softwood laminates together with vertical layers of elastomeric vibration dampers. These lightweight perimeter dampers actually increase vibration absorption the faster you ride while maintaining an incredible amount of snap and liveliness, providing a level of edgehold and high speed performance that only a Never Summer snowboard can deliver.

Press Flex Core

This rocker core design is perfect for the Evo-R and Revolver-R models. This core features 2 specific softer flex points between the feet creating better hinge points for ultimate pressing and ollie performance.

Sintered P-tex Sidewall

We were the first snowboard company to use and perfect SINTERED P-TEX SIDEWALLS, and we've never seen one crack. Unlike conventional ABS sidewalls, that have a tendency to crack in colder temperatures, SINTERED P-TEX SIDEWALLS maintain their integrity at any temperature.

RDS 1 Damping System

This is our most extensive damping system specifically designed for the Premier F1-R and Lotus-R. Three full perimeter layers of elastomeric rubber foil are laminated between the metal edge, fiberglass and wood core. This provides unmatched stability and a smooth riding feel especially at high speeds.

RDS 2 Damping System

Similar in design to the RDS 1, the laminated damping layers on the RDS 2 are more extensive the full length of the effective edge, and less extensive in the tip and tail. This combines high speed stability with reduced tip and tail swing weight.

RDS 3 Damping System

This lightweight system uses three narrower laminated damping layers that provide the perfect combination of vibration absorption and stability. RDS 3 is specifically designed for the SL-R, Legacy-R and Infinity-R.

EDS Damping System

The EVO-R DAMPING SYSTEM (EDS) delivers increased edgehold and high speed stability without compromising the Evo-R and Revolver-R's freestyle performance.

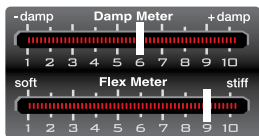

Durasurf Sintered 4501 base

Crown Plastics has been the industry leader in sintered materials for over 34 years and has created the DURASURF 4501 sintered base exclusively for Never Summer. This new high density base is extremely fast and will provide unmatched performance and durability.

DAMPNESS & FLEX METERS

Dampness: 10 is very damp (more stable and smooth riding at high speeds), 1 is least damp (more snappy and lively underfoot) **Flex:** 10 is stiffer in flex (better for high speed freestyle and freeriding, better for bigger riders), 1 is softer in flex (better for presses, butters, more forgiving)

Example:

BI-LITE Fiberglass

BI-LITE fiberglass combines many of the strength characteristics of STS ADVANCED fiberglass with an ultra light glass fiber matrix. This delivers incredible freestyle and freeride performance without sacrificing durability.

CARBON VX SYSTEM

Never Summer's exclusive CARBON VX system has been divided into three separate design systems to offer the best combination of edge response, high speed stability and localized torsional stiffness. Our CARBON V-Twin, VXM and VXR systems use NS's engineered carbon laminate "V"s to increase energy transfer from the point of generation under the bindings to the snowboard's edge providing superior edgehold and response. Varying carbon "V" configurations create specific energy transfers and flex patterns to accommodate different riding styles.

Our CARBON VX and V-Twin system increases snap and power directly behind each binding, towards the center of the board without creating a stiff, flat spot in the center of the snowboard. This provides a powerful but smooth and consistent flex pattern.

Carbon V-Twin Laminate Technology

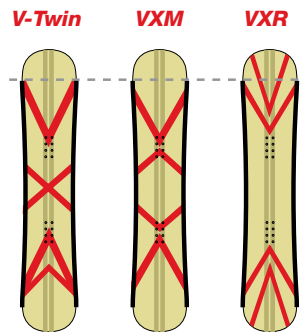

The Premier F1-R and Lotus-R benefit most from the CARBON V-Twin laminate system which extends the carbon "V"s from the bindings to the ends of the effective edge increasing power and edge response. An additional carbon V is added to the tail to increase edge hold and power out of turns.

Carbon VXM Laminate Technology

The carbon "V"s used in the Heritage's CARBON VXM system are set back from the ends of the effective edge to slightly soften the nose and tail while providing power, increased torsional stiffness and edge response from foot to edge. This is the perfect system to combine high speed stability with all mountain freeride performance.

Carbon VXR Laminate Technology

The CARBON VXR system is specifically designed for our SL-R, Legacy-R, Evo-R, Revolver-R and Infinity-R freestyle snowboards. The carbon "V"s are set back even further from the tip and tail to increase power and stiffness from the bindings to the edge. This system also helps soften the tip and tail just enough to help you dominate any terrain park or kicker that crosses your path.

STS Pretensioned Fiberglass

The world's best snowboard fiberglass, period. Our STS ADVANCED fiberglass is a pre-hardened, pre-tensioned, layered laminate that has added elastomer stringers between the 0 degree and 90 degree glass fibers the length of the effective edge. This produces a stronger bond between the individual glass laminates giving our snowboard unmatched strength, edge hold and performance.

Micro-Lam Carbon Technology

Eight individual layers of fiberglass combined with carbon uni-fibers and pretensioned STS glass stringers give the Titan the most advanced structural laminate combination we've ever developed. The four fiberglass layers closest to the core are 45 degree laminates providing torsional stiffness and edge response. The 4 layers furthest from the core are 0 and 90 degree laminates, giving the board its superior strength from tip to tail and edge to edge. Carbon "V"s above the core provide increased snap, strength and power out of turns while the STS pretensioned glass stringers below the core, enhance camber retention and provide unmatched durability.

TDS Damping System

The TITAN DAMPING SYSTEM (TDS) greatly reduces vibration and provides unmatched high speed stability and control. Thin elastomeric rubber stringers reduce vibration from the metal edge and surrounding laminates. Stringers below the inserts and under the carbon dampen any additional vibration near the bindings, giving the Titan a smooth riding feel underfoot without sacrificing snap and power throughout the board.

Tri-Radial Sidecut

The TRI-RADIAL sidecut makes use of 3 different primary sidecut radiuses. A moderate center radius between the feet helps to stabilize the board at high speed. The more aggressive front radius, from the front foot to the front edge contact points, initiate turns effortlessly. The most aggressive rear radius, from the back foot to the rear edge contact points, give the Titan a quick and powerful finish to each turn.

Durasurf XT Sintered 5501 base

Crown Plastics has developed an exclusive, super fast, durable sintered base specifically for the Titan. Just the right amount of graphite has been added making the DURASURF 5501 XT base the fastest we've ever used.

One Ball Jay XT

OBJ mixes a custom wax formula specifically for the Titan. This wax blends paraffin, including fluorinated paraffin, creating a bond to the XT sintered base that is ultra hydrophobic. In short, this is the fastest wax you'll find anywhere.

LIMITED EDITION

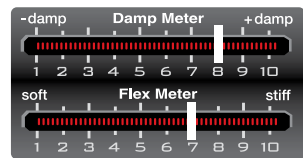

TITAN & TITAN TX *type: freeride***TITAN**

The Titan rides smoother, responds quicker and turns faster than any freeride board you have ever ridden. Exclusive laminates, base material, damping system and shape make the Titan the choice for those who want to experience the ultimate freeride snowboard.

R.C. Technology (pat.pend.) & Vario Power Grip sidecut

PREMIER F1-R

type: freeride

Our high performance Premier F1-R takes freeride technology to a whole new level! The Carbon V-Twin Laminate Technology and custom F1 Elastomeric Stabilizers underfoot increase edgehold and vibration absorption in any snow condition. With the NS freeride technology, the Premier F1-R will power through anything in its path keeping you on edge and in complete control at any speed. The modified NS Custom Flightcore also incorporates a multi-flex camber giving the Premier a powerful tail flex and a more responsive mid flex. For unmatched carving ability, powder floatation and effortless turn initiation, the F1-R has arrived.

SL-R *type: all mountain freestyle*

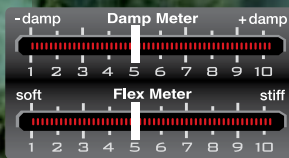

An extremely agile, high performance freestyle board that does it all, the SL-R is not only versatile, but offers powerful edge to edge response and maintains a forgiving tip and tail. If you want a board that excels in the park, on groomers, or on backcountry kickers, this is it.

LEGACY-R

type: mid-wide all mountain freestyle

A wider version of the SL-R, this deck dominates every part of the mountain from parks, to pow, to steeps. Its width eliminates most toe and heel drag, but is narrow enough to be quick and responsive. A deeper sidecut, the Carbon VXR and powerful flex make it the most versatile, high-performance mid-wide board we've ever built! 'Nuff said.
