# RIPSAW/RIPSAW X

Type: Aggressive twin everything

Introducing the true twin Ripsaw Camber Rocker (CR). Like nothing you've ever ridden before, it goes everywhere and shreds anything. Our new CR Technology features amplified camber areas that are longer and deeper than our traditional Rocker Camber (RC) boards. This brings you twice the amount of camber while still retaining RC playfulness. The true twin Ripsaw CR provides superior edge hold, amazing playfulness, incredible float and gigantic pop...especially when compared to traditional camber boards. Not for the faint of heart, the stiffer flex with Camber Rocker profile makes this modern twin the go-to board for the aggressive rider who shreds everything.

MODEL FOR 14/15!

# SNOWTROOPER/ SNOWTROOPER X

Type: All mountain

The new Snowtrooper builds on our proven flex and forgiving feel of the legendary SL/ Legacy models and takes it to the next level. It features a new slightly setback functional shape and Extended Rocker Camber (EXRC) profile. Carbon VXR coupled with Vario Powergrip Sidecut provides groundbreaking edge hold and response. The EXRC makes the Snowtrooper snappy, agile, and improves float. Versatility defined, the Snowtrooper is equipped and ready for any terrain.

# CHAIRMAN/CHAIRMAN X

*Type: High-performance freeride/freecarve*

The Boss...Mr. Big...CEO of Shred...introducing the Chairman. We've taken our time tested, pow slaying, hard charging Premier F1 and Raptor, mashed them together and created the elite freeride board. The new sidecut utilizes multiple radiuses above and beyond our Vario Power Grip for trench digging power. This enhanced edge hold is combined with mega damping and stiffer flex empowering the Chairman to mow through anything in its path. Look no further the Chairman is in charge and delivering the goods.

# COBRA/COBRA X

Type: All mountain

The Carbonium Cobra is the highest performance, most versatile all mountain board ever made. Featuring a drawn out nose that knifes through soft snow, a blunted quick spade tail for enhanced float, slightly set back for a more directional ride, and a dual top and bottom carbon matrix for incredible power underfoot. The futuristic shape and time tested edge hold of Vario Power Grip Sidecut empowers the Cobra to strike any terrain with deadly force.

# PROTO HD/PROTO HDX

Type: All mountain freestyle twin

The Proto HD is the Swiss Army Knife of snowboarding because today it's all about versatility. We push ground breaking innovations through the Proto because Proto is short for Prototype. Our Extended Rocker Camber profile allows effortless edge to edge transitioning. Our Harmonic Dampers and Perforated Rocker Pads eliminate vibration yet the board remains super crisp and lively. A snow warning has been issued and the mountains are scared. The balanced true twin Proto HD has arrived.

CARBONIUM  
SERIES

# RAVEN

*Type: Women's all mountain*

Soaring above all others, the Carbonium Raven is the most high tech women's all mountain board on the market. The slightly stiffer flex and extensive damping make the Raven the right choice for women who love going fast and laying down hard carves. A more drawn out nose and quick tail allows the board to plane off on top of the deepest pow. If you're looking for a smooth, stable, performance driven women's all mountain board, you've found it in the Raven.

# PROSPECTOR SPLIT

Type: *Freeride/big mountain split*

The Prospector Split is all about exploration and it's here to make its claim. Featuring the mother load of technical features including a new extended transition profile, Carbonium Laminate Technology and a super progressive shape. The taper and spaded shape allows the tail to sink while the more defined lower profile tip planes off on top of the deepest pow. A slightly stiffer flex and more extensive rubber damping system make this split a real charger with stability at speed on variable surfaces. The flat zone in our EXTRC provides extra grip in the touring mode for climbing and traversing while maintaining the effectiveness of our Rocker Camber scheme in ride mode. The agile shape and lightweight yet durable construction of the Prospector Split equips today's backcountry enthusiast with the right tool for uphill speed and downhill performance.

PIPE & PARK / FREESTYLE / FREERIDE / BIG MOUNTAIN

# PROFILE DESCRIPTIONS

## CAMBER ROCKER PROFILE (CR)

Designed exclusively for our Ripsaw CR, the Camber Rocker Profile features Amplified Camber areas that apply pressure over the ends of the board for incredible edge hold and pop. An extended transition area and low profile tips help neutralize the camber pressure when the board is disengaged for a forgiving feel, fluid edge to edge response, increased glide, and powder floatation.

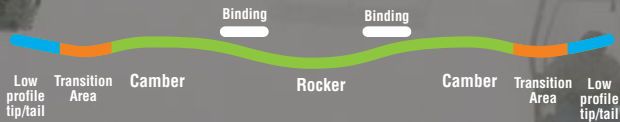

## ORIGINAL ROCKER CAMBER PROFILE (RC)

Our original Rocker Camber Profile is the best of both worlds...rocker underfoot for floatation, mobility, and a forgiving feel, plus camber extending from the outside of the mounting area to the transition area for superior edge hold and explosive pop. The transition area at the end of the camber extends to the effective edge keeping the board from pushing against the snow for effortless glide while making it less likely to catch an edge. RC delivers all the benefits of a rocker design with the spring, stability and edgehold of camber.

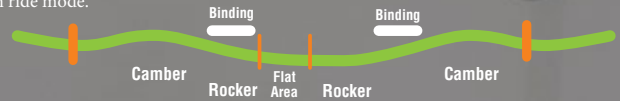

## EXTENDED TRANSITION ROCKER CAMBER PROFILE (EXRC)

Longer transition area extending from the end of camber and into the low profile tip/tail enhancing the inherent characteristics of our Original Rocker Camber Profile. This is captured by the extended transition areas decreasing pressure over the ends of the effective edge, allowing the board to flow instead of pushing against the snow. This creates more fluid edge transfer, increases glide and powder floatation in flat areas of the board. EXRC improves edge hold when the camber is engaged yet is more forgiving and less likely to catch that edge when in neutral position.

## EXTENDED TOUR ROCKER CAMBER (EXTRC)

Flat area initializing in touring bracket zone increases skin contact area for less slip while preserving the effectiveness of Rocker Camber in ride mode.

# ROCKER + CAMBER = VERSATILITY THE SCIENCE OF SNOWBOARDING PERFECTED!

*Never Summer snowboards feature our patented Rocker Camber (RC) and Vario Power Grip Sidecut technology, combining a rocker freestyle feel with all mountain high speed performance. Older generation rocker designs that lack any camber may perform well in powder and parks, but they are deprived of stability and edge hold when riding fast. This is not the case for our versatile RC snowboards. The RC profile goes anywhere and does anything, from shredding the park, to charging steeps, to slashing pow. RC technology blends a NS custom rocker profile with separate camber areas at each end of the board, providing unmatched power and snap. RC Technology wouldn't be complete without the Vario Power Grip Sidecut. Vario sidecut works perfectly with our RC design by adding increased edge hold precisely where it's needed most, giving you total control and response in any condition. Rocker Camber and Vario Power Grip Sidecut is the science of snowboarding perfected!*

## VARIO POWER GRIP SIDECUT

Vario Power Grip Sidecut utilizes multiple radiuses creating extra contact points to enhance edge hold. A flat section in the rocker area provides a broad contact point when flexed, however when unbent allows the board to track straight and not catch. Flanking this straight section are two shallow radius which provide the second and third contact points. Towards the ends of the sidecut are deep radius which render quick turn initiation and the final contact points.

# MATERIALS + CONSTRUCTION

## NS CUSTOM FLIGHTCORE

Never Summer's exclusive CUSTOM FLIGHT CORE is the most technically advanced core system we've ever used. Designed and built in NS's wood-core facility, these cores fuse premium hardwood and ultra light softwood laminates together with vertical layers of elastomeric vibration dampers. These lightweight perimeter dampers actually increase vibration absorption the faster you ride while maintaining an incredible amount of snap and liveliness, providing a level of edgehold and high speed performance that only a Never Summer snowboard can deliver.

## PRESS FLEX CORE

This rocker core design is perfect for the Evo, Revolver and Onyx models. This core features 2 specific softer flex points between the feet creating better hinge points for ultimate pressing and ollie performance.

## NS SUPERLIGHT WOOD CORE

Taking our custom flight core even further, we've designed the SUPERLIGHT WOOD CORE specifically for our new Carbonium series. This core blends extremely light wood with durable hardwood for unmatched strength to weight ratio.

## RDS 1 DAMPING SYSTEM

The laminated damping layers on the RDS 1 are more extensive the full length of the effective edge, less extensive in the tip and tail. This combines high speed stability with reduced tip and tail swing weight.

## RDS 1+ DAMPING SYSTEM

Designed exclusively for The Chairman, Prospector and Summit RDS 1+ is our most extensive damping system. With twice the amount of elastomeric rubber foil as RDS1 running along the entire perimeter of the board for unmatched stability at speed. RDS1+ provides incredible vibration absorption along the effective edge while stabilizing the nose of the board in variable conditions.

## RDS 2 DAMPING SYSTEM

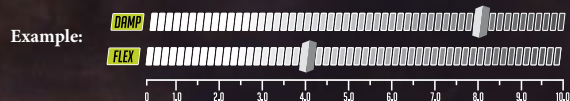

This lightweight system uses three narrower laminated damping layers that provide the perfect combination of vibration absorption and stability. RDS 2 is the perfect balance of freeride stability and freestyle liveliness.

## FREESTYLE DAMPING SYSTEM

Specifically designed for our Evo, Revolver and Onyx models, FDS utilizes thinner rubber foil for a lighter snappier feel. While still providing stability not generally found in a freestyle, pipe/park board.

## DAMPNESS & FLEX METERS

Dampness: 10 is very damp (more stable and smooth riding at high speeds), 1 is least damp (more snappy and lively underfoot) Flex: 10 is stiffer in flex (better for high speed freestyle and freeriding, better for bigger riders), 1 is softer in flex (better for presses, butters, more forgiving)

## HARMONIC TIP/TAIL DAMPER (HDT)

Harmonic dampers in the tip and tail take out a high percentage of residual vibration by quieting the nose and tail. This enhances stability at speed, in variable snow conditions and on board landings without deadening the liveliness and pop of the cambered areas.

## PERFORATED ROCKER PAD

Perforated to reduce weight these thin elastomeric pads are strategically located in the mid-section of the Proto HD/Proto HDX. This absorbs the vibration between the feet and provides a buffer in the rocker area which is in continuous contact with the snow.

## ELASTOMERIC UNDERFOOT STABILIZERS

Elastomeric Rubber Stabilizers directly below the mounting area provide optimum vibration absorption and increase high speed stability while reducing foot fatigue.

## CARBONIUM LAMINATE TECHNOLOGY

More carbon equals more power and performance. The Carbonium Laminate Technology combines an advanced top and base carbon matrix to maximize torsional response and strength where it's needed most. The result is a lightweight yet powerful design that will keep the Carbonium Series boards going strong for years. NOTE: The Chairman has long Carbon V's on the bottom of the core to put direct pressure over snow with a big Carbon X on top of mid-section of the core for torsional rigidity between the feet.

## WOMEN'S CARBONIUM LAMINATE TECHNOLOGY

WCLT has been designed specifically for the Carbonium Raven. Narrow Carbon stringers on the top and bottom of the wood core provide power and energy transfer without sacrificing the torsional control a lighter rider needs. Additional fiberglass strips reinforce the effective edge for hold and durability.

## LOW PROFILE TIP/TAIL

A low profile in the nose and tail of the snowboard maximizes material contact with the snow for more powerful ollie/nollie pop and adds stability to your landings. Low Profile Tip/Tail also reduces the plowing effect in the nose for better glide to the next feature and superior float when it's deep.

## CARBON VXR LAMINATE TECHNOLOGY

The Carbon VXR was the first carbon fiber configuration we designed for our Rocker Camber and we hit the nail on the head. Carbon V's extended out from the inserts to the effective edge for quick response while stiffening the board torsionally. Additionally V's are positioned to the ends of the board providing maximum boost and pop when loaded up. This is an ideal layout to transfer energy to the end of the effective edge, tip/ tail and still give the board a softer more forgiving mid flex for torsional control.

## CARBONIUM TOPSHEET

A very durable, scratch and chip resistant material with a high tech carbon fiber like visual. This textured material also provides more grip than a gloss topsheet, working as a built in stomp pad.

## SINTERED P-TEX SIDEWALL

We were the first snowboard company to use and perfect SINTERED P-TEX SIDEWALLS, and we've never seen one crack. Unlike conventional ABS sidewalls, that have a tendency to crack in colder temperatures, SINTERED P-TEX SIDEWALLS maintain their integrity at any temperature.

## STS PRETENSIONED FIBERGLASS

The world's best snowboard fiberglass, period. Our STS ADVANCED FIBERGLASS is a pre-hardened, pre-tensioned, layered laminate that has added elastomer stringers between the 0 degree and 90 degree glass fibers the length of the effective edge. This produces a stronger bond between the individual glass laminates giving our snowboard unmatched strength, edge hold and performance.

## BI-LITE FIBERGLASS

BI-LITE fiberglass combines many of the strength characteristics of STS ADVANCED fiberglass with an ultra light glass fiber matrix. This delivers incredible freestyle and freeride performance without sacrificing durability.

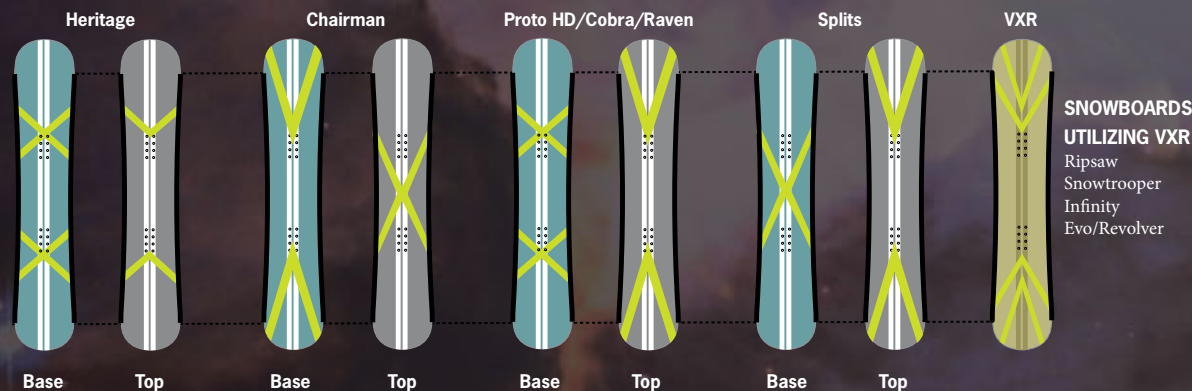

## DURASURF SINTERED 4501 BASE

Crown Plastics has been the industry leader in sintered materials for over 36 years and has created the DURASURF 4501 sintered base exclusively for Never Summer. This new high density base is extremely fast and will provide unmatched performance and durability.

## DURASURF XT SINTERED 5501 BASE

Crown Plastics has developed an exclusive, super fast, durable sintered base specifically for the Carbonium Series. Just the right amount of graphite has been added making the DURASURF 5501 XT base the fastest we've ever used.

## CARBON FIBER CONFIGURATIONS

# LONGBOARDS

## REAPER

*Type: Downhill Freeride*

The Reaper is our new mountain-road tested freeride/downhill bomber. This board features molded base channels that give you a flush truck mount and a lower profile than standard top mounts. The “W” concave runs up the center of the deck adding stiffness and fits right into the arches of your feet giving you added control and stability. This board also features our new 3-D molded and flared wheel wells that allow you to use larger wheels without wheel bite. It’s cool to cruise the beach, but life changing to charge mountains on a Reaper.

LENGTH	WIDTH	WHEEL BASE
37.5	10	24-29

in inches

## ADMIRAL

*Type: Freeride TM*

Freestyle/freeride enthusiasts...the Admiral will have you stoked! Dual core technology allows us to incorporate our CNC-3D channels and wheel wells. The channels add stability and create rails for pre-grabs and sliding. The CNC-3D wheel wells provide you with plenty of different wheel options. Wheel flares and the “W” concave under foot lock in your feet for laying thane.

LENGTH	WIDTH	WHEEL BASE
37	10	23-24

in inches

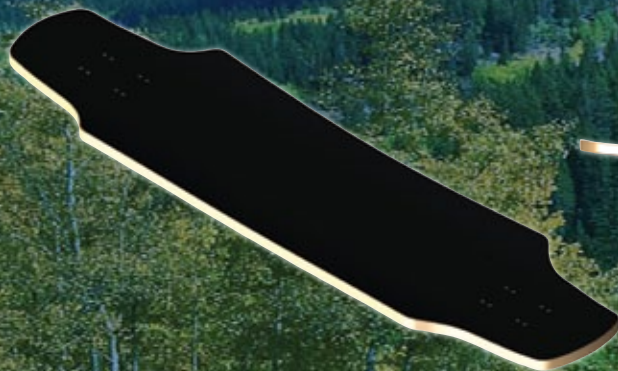

# COMMANDER

*Type: Freeride TM*

When the Admiral is away the Commander is in charge. Staying true to the Admiral's roots this board has a mellow 'W' concave under foot coupled with a twin shape and kicks. The Commander is the perfect board for kicking around town, practicing slide variations, or drifting your favorite mountain roads.

LENGTH	WIDTH	WHEEL BASE
39.5	10	25.5-26.5

in inches

# DEFENDER

*Type: Cruiser*

Introducing the Defender, an American made classic pintail sidewalk surfer. A mellow rocker and slight concave make the Defender a stable platform for carving turns through the neighborhood or dog pull around the park. The Defender brings the feel of shredding powder or riding waves to the street.

LENGTH	WIDTH	WHEEL BASE
43	9.7	30.5

in inches

# DEVIANT

*Type: Freeride DT*

The Deviant is the only freeride board you'll ever need! Its twin drop-down and drop-thru shape is low and stable. The board's progressive elliptical "W" concave and rocker create amazing pockets that lock in your feet. The Deviant dominates everything from sliding to freeriding and even the steepest hills. The Deviant is a beast!

LENGTH	WIDTH	WHEEL BASE
42	10	29.6

in inches

# HOOLOGAN

*Type: Freeride DT*

Looking for the ultimate freeride board without the extra length? The Hooligan comes with all the Deviant's features while giving you the shorter length. This fun-sized, twin freeride deck will take your riding to the next level. Ya Mon!

LENGTH	WIDTH	WHEEL BASE
40	10	27.6

in inches

# CLUTCH

*Type: Freeride DT*

Ready to shift your longboarding experience into high gear? Use the Clutch. The Clutch features low rise, high-speed stability at a low profile price. Beginner or expert, Sunday drive or burning rubber around town, the Clutch is all about performance.

LENGTH	WIDTH	WHEEL BASE
39	10	29.4

in inches

# HEIST

*Type: Flex deck*

Our legendary lightweight flex deck features nose and tail kicks for all your favorite flat ground tricks. Massive camber and high-end fiberglass enable a rider to load the board up and spring out of turns while the drop-thru design offers slide stability. Want a board that does it all? Don't get robbed...get a Heist.

## QUALITY, HAND-CRAFTED SNOWBOARDS SINCE 1991

NEVER SUMMER'S REPUTATION OF QUALITY AND DURABILITY BEGAN IN THE EARLY YEARS OF SNOWBOARDING. DESIGNING AND BUILDING SNOWBOARDS SINCE 1983 HAS GIVEN US YEARS OF EXPERIENCE IN TESTING AND PERFECTING OUR SNOWBOARD DESIGNS AND CONSTRUCTION METHODS. WE CONTINUE TO WORK VERY CLOSELY WITH THE WORLD'S LEADING RAW MATERIALS MANUFACTURERS AND ENGINEERS TO MAKE SURE EVERY NEVER SUMMER SNOWBOARD IS THE MOST DURABLE, HIGH PERFORMANCE BOARD ON THE PLANET! EACH SNOWBOARD IS CAREFULLY HANDCRAFTED IN OUR DENVER, COLORADO FACTORY TO PRECISION TOLERANCES. ONLY THE WORLD'S BEST CORE SNOWBOARD SHOPS SELL OUR PRODUCTS. NEVER SUMMER HAS BECOME THE WORLD'S PREMIER INDEPENDENT SNOWBOARD COMPANY BY FOCUSING LESS ON EXCESSIVE HYPE AND PROMOTION, INSTEAD FOCUSING ON USING THE HIGHEST QUALITY MATERIALS, EXCEPTIONAL CUSTOMER SERVICE AND REMARKABLE CRAFTSMANSHIP.

—TRACEY AND TIM CANADAY
